Subject: NO TO YUCCA MTN

Part of Records Package / Supplement / Correction

i must disagree with the current proposal to use the Yucca Mtn site as a repository for nuclear waste. There are too many problems yet to be figured out in considering Yucca Mtn and it is a bad idea.

We need to stop producing nuclear waste first off. The nuclear industry is a heavily polluting and a poisonously polluting industry. A move to renewable energy sources is necessary for our future. Already there are many sites which have been poisoned with nuclear waste and the waste should remain there. There is no safe way to transport nuke waste across the country and citizens would unnecessarily put at risk by the transport of nuclear waste. Yucca Mtn is a shortsighted answer to a long potential problem and as such it is unacceptable.
